SUMMARY

I help service businesses build high-converting funnels and automated CRM systems that turn casual leads into booked calls. Starting with a clear strategy, I design the front-end pages and connect the entire back-end—including sales pipelines, automated follow-ups, and appointment reminders. While I specialize in GoHighLevel, my tech stack also includes custom ReactJS development and advanced automations using Zapier, Make, and n8n.

WORK EXPERIENCE

Customer Service Representative July 2024 - October 2024

- Worked as a team leader and a tech support specialist for an app called Spark – Walmart, where I handled map management, processed tickets, and resolved basic technical issues related to the application.

Virtual Assistant / Executive Assistant Aug 2024 - June 2025

- I manage digital marketing for my client, including Facebook Ads, LinkedIn Sales Navigator, and email campaigns. I use GoHighLevel, Kartra for automation, and ClickUp for task tracking.
- Assisted in developing their website, using both coded environments (e.g., HTML, CSS, JavaScript) and no-code platforms (e.g., Softr App), and designed layouts with Figma.

CRM & Funnel | AI Automations Engineer July 2025 - June 2026

- I architected the complete CRM system and automated workflows for the brand, including their service bookings, pipeline management, and email marketing. I used GoHighLevel as the core hub, along with Zapier and n8n for advanced AI automations.
- Developed their custom front-end website to connect with the CRM, strictly using coded environments (e.g., ReactJS, Vanilla CSS, JavaScript) to build out the features and layout.

PROJECTS

Facebook and LinkedIn Campaign | Promise Game Website and App Aug 2024 - June 2025

- Co-led a two-person team for the Promise Game Campaign, managing both the technical build and the marketing strategy. I designed the UI/UX in Figma and developed the front-end website and app using Wix, Softr, and custom code. Alongside the development, I executed lead generation campaigns using Facebook and LinkedIn Sales Navigator to find prospects and increase client reach.

Dental Clinic | Full CRM & Funnel - Automation System Feb 2026

- Designed and built a mock full-system architecture for a dental clinic, focused on generating consultations. I developed the custom front-end landing page using ReactJS and Vanilla CSS. Once a lead is captured, I automated the entire backend process—including booking, appointment reminders, lead nurturing emails, and automatic pipeline movement—to track every prospect efficiently and securely.

Smart Funnel & CRM Architecture for Marketing Agencies | Webinars Feb 2026

- Engineered a complete CRM and AI automation mockup tailored for a webinar event and a marketing agency. I built high-converting sales funnels and integrated custom AI chatbots, training them on real business FAQs to handle customer inquiries instantly. Behind the scenes, I set up full backend automations to manage event registrations, lead follow-ups, and seamless pipeline tracking without manual effort.
